## Meeting Notes

### **Sustainability report update**

The club shared the latest draft of the Environmental and Sustainability Report ahead of publication.

The report was scheduled for release on Wednesday 28th January, and would be released in a PDF format coinciding with a news article on the Wolves website providing wider context.

The article on the Wolves website will also reference dedicated focus fixtures, the recently published fan travel survey and other related sustainability initiatives.

### **Review from the group**

The club revealed that the report was almost finalised with just some small changes left to make before final publication.

Attendees were invited to flag any corrections they spotted and to flag any content they felt was worth adjusting or adding. They were also asked to consider how well the report reflected the programme progress over the past three years and how the sustainability programme has evolved.

Various pieces of feedback were given on the report from the group, such as providing a uniform approach across currency mentioned and providing clarity on data points.

### **Future priorities and internal support**

The club revealed that the internal working group, which includes various figures from across the club, has recently discussed setting project priorities for the coming year.

It was revealed that there has been strong senior management support to drive sustainability work across the club.

Attendees were encouraged to share further thoughts on priority areas after the meeting.

### **Group engagement and future planning**

The group then discussed anticipating future challenges and planning proactively.

A refresh and relaunch of the group as a whole is planned ahead of the summer with the aim to expand the group to 15-20 participants.

It was also revealed that the plan would be to ensure this group is also represented on the Fan Advisory Board in the future.

**Thank you for reading.**
